

The Neurosequential Model of Therapeutics® NME Trainers Program - 2022 Virtual Bootcamp

NME Trainers Program: Brief Overview

The Neurosequential Model in Education (NME) brings The Neurosequential Network's neurodevelopmental and trauma-informed approach to the classroom. Our goal is to educate faculty and students in basic concepts of neurosequential development and how to apply this knowledge to the teaching and learning process. The NME curriculum provides an introduction to core concepts such as how the brain works, develops, changes and is impacted by developmental adversity, including trauma. The NME training provides practical application of these key concepts that can be useful in everyday educational settings. NME Trainers learn to use a Classroom Functional Map that allows teachers a simple and rapid way to assess their students' relative brain-mediated strengths and weaknesses.

The majority of the NME Trainer's Program is conducted via distance learning using web-archived materials that allow participants to work through the content in a flexible manner, allowing busy professionals to participate without disrupting their usual activities. The format, while structured and manualized, is flexible and convenient. While this flexibility is truly welcomed, many professionals appreciate more intensive and interactive opportunities to connect with their fellow NME learners and practitioners. NME Bootcamp provides this face-to-face learning experience.

NME Trainers Program Bootcamp: Virtual Model 2022

The Neurosequential Network is pleased to offer a Bootcamp for our NME Trainers Program on **Tuesday, October 25, 2022 and Wednesday, October 26, 2022**. This Boot Camp is a **live, virtual-learning experience** led by NME Project Director Steve Graner.

Please note that participants must plan to attend for the full two-days online and must have access to a computer and high-speed internet connection to participate.

NME Trainers Program Curriculum:

The Neurosequential Network's NME Trainers Program is based on a "Train the Trainer" model. In its current phase, The Neurosequential Network has developed three sets of online modules which are included in the current NME Trainers Program curriculum:

- 5-Session Introduction to NME Series (5 total training hours)
- 10-Session Case-based Series (15 total training hours)
- 5-Session Classroom Tools/Minimap Series (5 total training hours)

Trainers complete these modules along with other required elements including readings and video content. Throughout the program, participants receive online support from our NME Project Director and a cohort of NME Fellows in Education and Advanced NME Trainers from other schools and communities.

The NME Bootcamp is a terrific way to kick off the NME Trainers Program and provides an opportunity for in-person learning and relationship-building. The NME Bootcamp will boost the learning process for NME Trainers and better prepare them to provide professional development and on-site support within their own schools and school districts. Following Boot Camp, participants will continue to work through the NME Trainers program curriculum and will be assigned to a study group that will meet virtually approximately once per month for 9 months to review and discuss each module.

Once training is completed, the NME Trainers join a worldwide network of NME practitioners who share best practices on an ongoing basis. New materials created by the Neurosequential Network to support NME trainers will be shared routinely as this community continues to grow.
